

Call for papers

ACA Conferences

<http://math.unm.edu/aca.html>

In 1995, at the University of New Mexico in Albuquerque, New Mexico, USA, was held the 1st International IMACS Conference on Applications of Computer Algebra. IMACS stands for "International Association for Mathematics and Computers in Simulation". Since 2001, the conference retains only the title "Applications of Computer Algebra". This conference is an annual meeting, devoted to promoting the applications and development of Computer Algebra and Symbolic Computation. Topics include computer algebra and symbolic computation in engineering, the sciences, medicine, pure and applied mathematics, education, communication and computer science.

Description of ACA 2013

<http://www.aca2013.uma.es/>

The meeting is run in a standard format where sessions are held in one or more 2 to 3-hour blocks of time. These blocks typically consist of half-hour talks or a one-hour overview and half-hour talks. The half-hour slot includes time for questions.

Session Proposals: If you wish to organize a Special Session at ACA 2013, send your proposal to the Program Chairs, which should include:

- the title of the Special Session,
- the contact information of the organizers,
- a short abstract stating the purpose of the Session.

The duties of the session organizers are:

- Submit a proposal for the session to aca2013@uma.es.
- Invite the speakers.
- Maintain a web page describing the session and providing talk abstracts.

The scientific quality of a special session is the sole responsibility of the session organizers. Each session organizing team will issue a call for papers/contributions stating the terms for submitting contributions, including the deadline each team has set for receiving. Please check the list of approval sessions at <http://www.aca2013.uma.es/> and consult the link to the session that addresses your interests.

See ACA 2013 website for more details:

Applications and Libraries development in DERIVE and TI-NSPIRE

Special Session of ACA 2013

José Luis Galán García; Pedro Rodríguez Cielos;
Gabriel Aguilera Venegas; Josef Böhm

<http://www.aca2013.uma.es/derive2013> ; aca_derive@ctima.uma.es

July 2-6, 2013
Hotel Málaga Palacio
Málaga, Spain.

Description of Applications and Libraries development in DERIVE and TI-NSPIRE

<http://www.aca2013.uma.es/derive2013>

DERIVE™ 6 is a powerful system for doing symbolic and numeric mathematics. It processes algebraic variables, expressions, equations, functions, vectors, matrices and Boolean expressions in the same way as a scientific calculator processes numbers.

Problems in the fields of arithmetic, algebra, trigonometry, calculus, differential equations, linear algebra, complex analysis and propositional calculus can be solved with a click of the mouse. Plots of mathematical expressions in two and three dimensions using various coordinate systems can be easily performed. Furthermore, the use of the slider bar utility allows beautiful presentations of plot movement and makes it possible to study plots depending on different parameters.

The seamless integration of numeric, algebraic and graphic capabilities makes DERIVE 6 an excellent tool not only for learning or teaching but also for doing mathematics in many applications.

The new TI-NSPIRE™ CAS technology makes it possible to recognize, simplify and calculate mathematical expressions, preserving the symbols including variables and terms.

This ability to enter and view equations and expressions on screen as they appear in textbooks may be especially useful for step-by-step, arithmetic, algebraic and calculus calculations.

The main purpose of this Special Session is to share the applications and libraries developed in DERIVE or TI-NSPIRE CAS. **Papers about the use of DERIVE or TI-NSPIRE CAS in different disciplines, the development of specific libraries, experiences involving DERIVE or TI-NSPIRE CAS are welcome.** Lectures using calculators (TI-92, Voyage 200, TI-NSPIRE CAS, Casio, ...), smart phones or mobile devices running CAS are also welcome.

Selected papers presented in this session will be published in a special issue of the [Journal of Symbolic Computation \(JSC\)](#), an Elsevier journal with impact factor in JCR (Science Edition).

Please, refer to the session website for more details at: <http://www.aca2013.uma.es/derive2013>
